

Administrative - Disable Registration for your Site

As an administrator of the Get My system, you will have the ability to manage whether registration remains enabled for your site. If you prefer not to have other persons registering for your site, or you have registered all of the users you expect to have using the site, you can disable registration by logging in as an administrative user, and clicking on the 'Manage' option in the upper right menu on desktop, laptop, or tablet; or by clicking / touching the hamburger menu icon on mobile, and selecting 'Manage' from the slide out side bar.

Once you are on the Management screen, you'll select the option for 'System Admin'.

Finally, in the System Admin view, you can disable registration by switching the toggle to the left.

System Administration

Registration Settings

Allow Admin Registration

Allow Registration

Users will no longer be able to reach the Registration page, and will be shown a friendly message telling them that Registration is disabled if they happen to reach it directly by the URL.
